

Report: act_report

WeRateDogs is twitter account that rates people's dogs often with humorous comments about the dogs. Having cleaned the data sourced from this account, below are a few insights gained.

1. From the data collected we notice that there are 4 sources of the user tweets; TweetDeck, Twitter Web Client, Twitter for iPhone and Vine - Make a scene. Of these 4 sources, majority of the tweets came from Twitter for iPhone. The least used source being the Tweet Deck. The histogram below gives a pictorial view of the insight mentioned.

Figure 1 - Histogram showing the sources of tweets

2. There are 4 dog stages; doggo, pupper, floofer and puppero. For some of the dogs, there seem to be 2 dog stages indicated.
However, majority of the dogs are in the pupper stage and the least being the floofer stage.

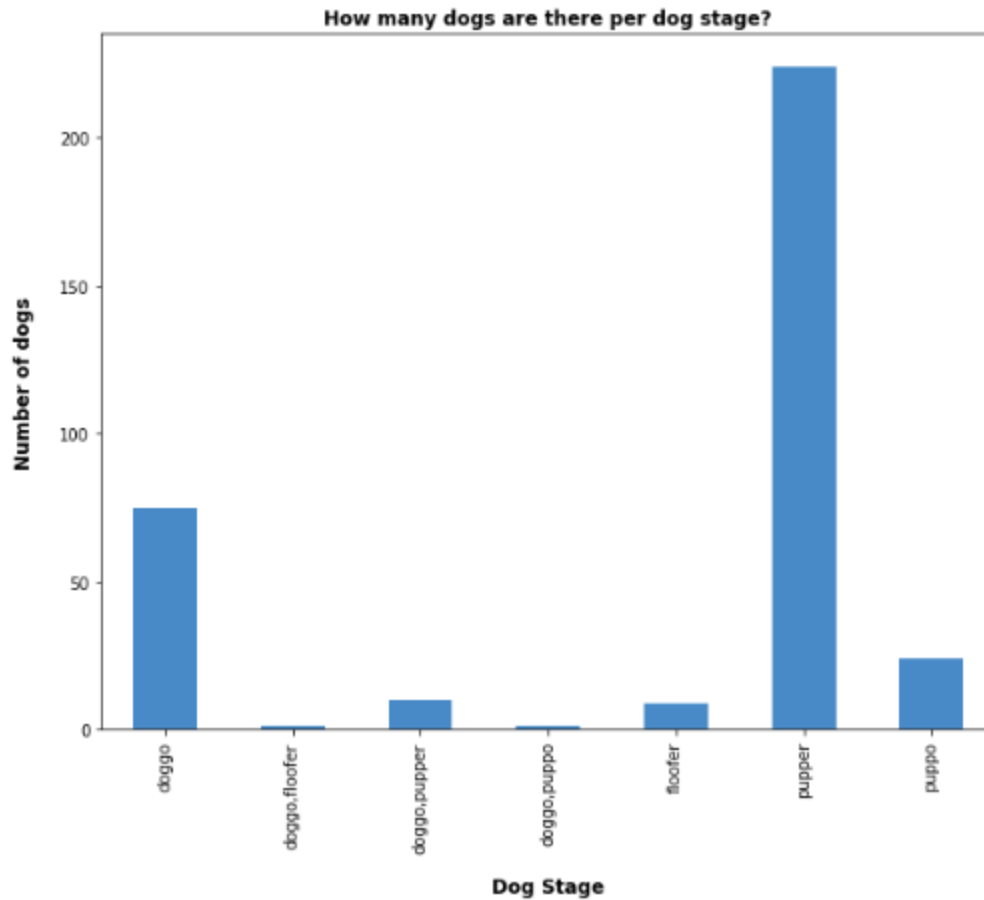

Figure 2 - Bar chart showing number of dogs per dog stage

3. We also notice that the dog stages also seem to have an influence on the number of likes (or favorites) and retweets.

From Figure 3 below, we notice that the pupper stage accounts for the most number of likes— with a favorite count of over 1.2M, closely followed by the doggo stage with almost 1.2M.

Similarly, the pupper stage accounts for the most number of retweets (over 400K retweets) with the floofer stage having the least number of retweets as seen in Figure 4.
